

Intelligent Protective Services **SECURITAS ČR s.r.o.**

Integrity | Vigilance | Helpfulness

INTEGRITY | VIGILANCE | HELPFULNESS

Global presence and local expertise

GUARDING

Guarding is one of the fundamental pillars of the services that we have been providing across all market segments since 1991.

Apart from standard services of guarding, we provide reception services, specialized guarding, executive protection and event security.

The added value of guarding services we provide is its **digitalisation** through the **Securitas Vision** system. It is communication, information, registration, control and reporting tool for collecting, analyzing and evaluating large amounts of security data. The result of our data work is predictive security, suggestions to increase productivity and to improve operational efficiency.

MOBILE SERVICES

A Mobile Patrol replaces the activities carried out by guarding, whose permanent presence on the site has no added value for customer. A Mobile Patrol has preventive, control character and brings significant security cost reduction.

All activities are carried out on the basis of a so-called task sheet and are electronically recorded and reported by the Securitas Vision system.

The typical activities of a mobile patrol are preventative controls of a site, exterior or interior inspections, coding, decoding of premises or assistance in this activity, checking compliance with a clean desk policy etc.

MONITORING

Monitoring plays a significant role in our portfolio of services. We divide the monitoring services provided by the Securitas Operation Center (SOC), which meets the certification for the supervision and alarm reception centers of CSN EN 50518 ed. 2 1-3, into two parts - **I&HAS monitoring** and **remote management and surveillance** from the so-called Remote Video Solutions (RVS) dispatch.

Within the RVS dispatch we provide online monitoring of sites by camera systems, remote guarding of premises, remote patrol inspections, remote entry / exit management, remote verification of persons / vehicles, etc. We provide **remote management** of I&HAS, ACS, CCTV systems.

We outsource local dispatch services.

TECHNOLOGY

We provide projection services, installation and integration of security systems, their service, maintenance and revision through our own experienced team of technicians.

By combining security services and technologies we create innovative **security solutions** tailored to customer needs. Examples of our specialized security solutions are the Remote Video Solution (permanent, temporary or mobile solution), remote entry / exit management, e-reception, smart parking system etc.

FIRE & SAFETY

We complement our portfolio of services with **Fire & Safety**. We provide fire prevention patrols, guarding by volunteer firefighters (knowledge of procedures for intervention during emergency situations), staff training and training of evacuations, assessment of fire documentation or fire protection training in practice in the so-called „Fire Truck“.

RISK MANAGEMENT

Our team of auditors provide security assessments & audits, risk analysis, penetration tests, personal security and compliance services.

For security assessment and risk analysis we use **Securitas Solution Tool (SST)**. The output is a risk analysis that becomes the basis for creating security solution of a site („*there is no effective security solution without a correct diagnosis*“).

**WE HELP
MAKE YOUR WORLD
A SAFER PLACE**
